

PROFILE | HSE professional minimizing operational loss and reducing incident, injury, and damage by an average 64% per project.

PROFESSIONAL BACKGROUND

Site Safety Supervisor | 2012 to 2022

Oil and Gas Company, Anytown, PV

- reduced incidents by 43% in the first week of arriving on client's shutdown project; methods included implementing a mentorship program and mandating 95% in-field time for HSE advisors
- identified opportunities to implement a cohesive drug and alcohol program, increasing worksite safety by a subsequent 22%; assessed existing conditions and employees' perspectives, exhibited trust in the employees participating in the program, and recognized milestones
- apprised workers of jobsite hazards and the controls in place to prevent harm or injury; enforced engagement and feedback to verify workers' awareness and commitment to safe work practices; spotted training opportunities, and determined what, when, and where before initiating
- conducted formal inspections to identify outdated controls; customized a high-level checklist inspection to summarize results of the worksite's unique circumstances; communicated findings site-wide for a cohesive implementation
- reviewed hazard analysis reports, field-level risk assessments, and work permits, analyzing each to identify potential for incidents; followed up by visiting worksites reporting a high scat-chart rating, and providing feedback to FLHAs to define methods for controlling high risk

Site Supervisor / CSS | January 2010 to June 2012

Pipeline Company, Canada

- intent on playing a consequential role in promoting a progressive safety culture, I applied training, knowledge, and skills to critically assess, plan, design, and implement comprehensive health and safety management systems designed to reduce harm to people, assets, and the environment
- planning the program originated with visiting the worksite and its supervisor, and reviewing and documenting the scope of work and its inherent hazards; subsequently becoming oriented to workers and their respective work areas and tasks, I identified program imperatives
- following industry guidelines and exercising discernment, I identified key elements to focus on while developing an integrated health and safety program, executing a uniform and cohesive company-wide implementation that produced a 79% decrease in incidents by the project's completion

TRAINING & CERTIFICATION
